A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 16, 2009 has been entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6-7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Guido et al (US 4,827,964).

It is believed that the general pertinence of the reference is readily apparent, see MPEP 706, 37 CFR 1.104 (c) (2). Transducer 16 is read as two pressure sensors since it measures both cabin pressure and line pressure. The cabin pressure measured is read as absolute pressure.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Guido et al in view of Babin, of record.

Guido shows the claimed device except for a bypass line having a solenoid valve. Babin teaches the use of a bypass line 22 with a safety solenoid valve 52 bypassing regulator 38 in the event of a power loss. It would have been obvious at the time the invention was made for one of ordinary skill in the art to have provided the regulator valve 19 of Guido et al with such a bypass line and solenoid valve to similarly bypass the valve in the event of a power loss.

Claims 6, in the alternative, and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guido et al.

Measuring absolute cabin pressure in the system of Guido et al is considered and obvious matter of engineering in view of the well known nature of the same. The provision of a cylinder to store the air for supply 34 of Guido et al is considered and obvious matter of design choice in view of the notoriously old and well known nature of air cylinders.

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
